

Title I Parent Survey Results
2015-2016
Pinellas County **TITLE I SCHOOLS**

The Pinellas County District's Title I office conducted a parent survey during December 2015 to assist Title I schools in evaluating their current family engagement practices. The survey was offered online and also distributed in paper/pencil form to all students in order to increase parent participation. Schools may use the survey data to identify areas of success and areas that need improvement. Survey results also can be used to determine priority areas and to guide planning of strategies and actions steps to strengthen family engagement.

This report contains a summary of the parent survey results for Belleair Elementary School.

Survey Considerations:

When interpreting the responses of your students' parents, keep the following cautions and limitations in mind:

- It is difficult to generalize to all parents from small numbers of responding parents. The total Title I district program *did* have a response rate from parents large enough to be considered representative of all parents. Approximately 8000 (24%) parents from the district's Title I parent population responded.
- Comparisons are provided that show Belleair Elementary School's parent responses compared to all Title I district's schools school parent responses, provided there were at least 30 parents participating in the survey. This minimum number of participants may be used to provide some insight into parents' perceptions, but may not be generalized to the remainder of the school's parents. The district comparisons came from a representative number of parents and schools and thus can be considered a valid cross-section of all Pinellas County Title I parents.

Explanation of survey results:

Table 1 displays demographic information of the parents responding to the survey. Demographic information includes race, primary parent language, and parent education. Parent diversity should be considered when planning family events or parent communication. Approximately 7% of the responding parents opted out of providing this information.

Table 2 displays parent responses to questions relating to the quality of the overall implementation of the Title I program within the district. These percentages reflect parents' overall agreement to how well the Title I program is being implemented at the school.

- *Opportunities for growth:*
 - ***Establish or Improve parent communication process.*** Only 56% indicated they were aware they had the opportunity to provide input into how Title I funds are spent at their

school. In addition, 50% of the parents indicated awareness of the programs and resources provided by Title I funds, 53% reported knowing about Title I events at the school, and 52% agreed that they know what it means to be a “Title I” school.

Table 3 displays parent responses to questions relating to parents’ direct involvement at the school.

Parents indicated whether they attended the Annual Title I Meeting, volunteered at the school or attended special events at the school.

- *Opportunities for growth:*
 - **Include volunteer opportunities in school communication plans and process.** Approximately 20% of the parents reported volunteering at the school, and 34% reported attending the Title I Annual Meeting.

Table 4 displays parent responses relating to potential barriers to having direct involvement with the school. Parents were asked to indicate whether specific challenges prevented their direct involvement at the school. Because parent involvement is one of the four cornerstones of the Title I program, these barriers should be considered when planning family events or establishing parent communication plans and processes.

- *Opportunities for growth:*
 - **Consider child care needs when scheduling parent meetings and events.** Approximately 31% of the parents indicated that child care needs prevented them from being more involved at their child’s school.
 - **Consider parents’ work schedules when planning meetings and events.** Since 58% of parents indicated work schedules as barriers to involvement, alternative times or integration of technology should be considered.
 - **Consider transportation when planning meetings and events.** Since 29% indicated lack of transportation as a barrier to involvement, alternative locations may be considered.

Table 5 displays responses to questions related to parents’ perceptions concerning parent efficacy; parent beliefs about their ability to affect their child’s learning. Research suggests that high levels of parental self-efficacy are strongly associated with school outcomes. The last line reflects the combined responses from all of these questions regarding parent efficacy for the Title I district schools.

- *Opportunities for growth:*
 - **Assist parents in making sure students’ learning needs are met.** Although 90% of the responding parents reported high parent efficacy, 71% of the parents reported feeling unsure about how to make sure the school met their child’s learning needs.

Table 6 shows responses to questions concerning the school’s effort to collaborate with parents.

Included were questions about whether Belleair Elementary School works with parents to improve areas such as student discipline, student attendance, parent involvement, etc. The last line reflects total agreement to all of the questions relating to the school’s effort to collaborate with parents.

- *Opportunities for growth:*

- *Growth opportunities vary by school, but overall parent agreement that the school makes an effort to collaborate with parents for school improvement was 91%.*

Table 7 shows parent responses relating to teachers' collaboration efforts with parents.

- *Opportunities for growth:*
 - ***Improve process for informing parents about academic expectations.*** *Only 71% of responding parents indicated they were informed of district and state academic expectations.*

Table 8 displays parent responses to questions that relate to a quality school climate such as student respect for teachers, whether the school values diversity, etc. Overall, parents reported positive school climates.

- *Opportunities for growth:*
 - *Growth opportunities vary by school, but overall parent agreement that the school has a positive culture is 91%.*
