Middle School Science Students Researched African American Scientists

Celebrating

Around School

Visual Arts students collaborated to create a mural for Black History Month. The students were to pick a person of their choice, and the person could be from the past or present. The range was from Harriet Tubman and sports heroes to Oprah and Barack Obama. Some of the personalities were rendered in specific color schemes with paint.

Middle School Science Students explored the topic of Landforms with edible creations.

Drone Technology

What are Drones?

A drone, is an unmanned aircraft. Drones are more formally known as unmanned aerial vehicles (UAVs) or unmanned aircraft systems (UASes). Essentially, a drone is a flying robot that can be remotely controlled or fly autonomously through software-controlled flight plans in their embedded systems, working in conjunction with onboard sensors and GPS.

Besides military use, Drones are also used in a wide range of civilian roles ranging from search and rescue, surveillance, traffic monitoring, weather monitoring and firefighting, to personal drones and business drone-based photography, as well as videography, agriculture and even delivery services. Drone Technology can be the next steps for secondary education.
