Grade 6 Math Adv Semester 1	Unit 1: Ratios and Rates	Projected Time Allotment: 11 Days
Standards/Learning Goals:		Content Limits, Assessment Types, Calculator
<p>MAFS.6.NS.2.4 Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 10. Use the distributive property to express a sum of two whole numbers 1-100 with a common factor as a multiple of a sum of two whole numbers with no common factor. <i>For example, express $36 + 8$ as $4(9+2)$.</i></p>	<ul style="list-style-type: none"> • Whole numbers less than or equal to 100. • Least common multiple of two whole numbers less than or equal to 12. <p>Calculator: NO</p> <ul style="list-style-type: none"> • Equation Editor • GRID • Matching Item • Multiple Choice 	
<p>MAFS.6.RP.1.1 Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. <i>For example, "The ratio of wings to beaks in the bird house at the zoo was 2:1, because for every 2 wings there was 1 beak." "For every vote candidate A received, candidate C received nearly three votes."</i></p>	<ul style="list-style-type: none"> • Whole numbers should be used for the quantities. • Ratios can be expressed as fractions, with ":", or with words. • Units may be the same or different across the two quantities. • Context itself does not determine the order. • Limit use of percent to MAFS.6.RP.1.3c. <p>Calculator: NO</p> <ul style="list-style-type: none"> • Editing Task Choice • Equation Editor • GRID • Hot Text • Multiple Choice • Multiselect • Open Response • Table Item 	
<p>MAFS.6.RP.1.2 Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship. <i>For example, "This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is $\frac{3}{4}$ cup of flour for each cup of sugar." "We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger."</i></p>	<ul style="list-style-type: none"> • Items using the comparison of a ratio will use whole numbers. • Rates can be expressed as fractions, with ":", or with words. • Units may be the same or different across the two quantities. • Context itself does not determine the order. • Name the amount of either quantity in terms of the other as long as one of the values is on unit. <p>Calculator: NO</p> <ul style="list-style-type: none"> • Editing Task Choice • Equation Editor • GRID • Hot Text • Multiple Choice • Multiselect • Table Item 	
<p>MAFS.6.RP.1.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.</p> <ol style="list-style-type: none"> Make tables of equivalent ratios relating quantities with whole-number measurements, find missing values in the tables, and plot the pairs of values on the coordinate plane. Use tables to compare ratios. Solve unit rate problems including those involving unit pricing and constant speed. <i>For example, if it took 7 hours to mow 4 lawns, then at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?</i> Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities. Understand the concept of Pi as the ratio of the circumference of a circle to its diameter. 	<ul style="list-style-type: none"> • Rates can be expressed as fractions, with ":", or with words. • Units may be the same or different across the two quantities. • Percent found as a rate per 100. • Quadrant I only for MAFS.6.RP.1.3a <p>Calculator: NO</p> <ul style="list-style-type: none"> • Editing Task Choice • Equation Editor • GRID • Hot Text • Multiple Choice • Multiselect • Open Response • Table Item 	

Decoded Standard	
<p>MAFS.6.NS.2.4 The emphasis for this standard is finding factors and multiples of a given number(s). Students need to know that numbers being multiplied are the factors, and the product is the multiple. Explore two different methods for factoring. Introduce the distributive property as an application of factors. When you add two numbers that have a common factor such as 36 and 8, you can remove the greatest common factor, 4, and distribute it to the remaining factors, such as: $36 + 8 = (4 \times 9) + (4 \times 2) = 4(9 + 2)$. (<i>Common Core Mathematics Companion</i>, Pg. 39)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> • Greatest Common Factors Students are given two whole numbers less than or equal to 100 and asked to find the greatest common factor. • Least Common Factors Students are asked to find the least common multiple of 8 and 12 and to explain how they found their answers. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> • Factors and Common Factors Students apply the concepts of factors and common factors in a context. • Multiples and Common Multiples Students apply the concepts of multiples and common multiples in a context. • Adding Multiples Students use repeated reasoning and generalizing to solve problems involving multiples. • The Florist Shop Students apply the concepts of factors and common factors in a context. • Bake Sale Students apply the concepts of factors and common factors in a context. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> • Grade 6, Module 2, Topic D, Lesson 17 students apply divisibility rules to understand factors and multiples • Grade 6, Module 2, Topic D, Lesson 18 Students find the least common multiple and greatest common factor and apply factors to the Distributive Property <p><u>Illuminations</u></p> <ul style="list-style-type: none"> • Distributing and Factoring Using Area Students are given expressions representing area of a rectangle and use this to enhance understanding of distributive property and factoring. <p><u>CPalms</u></p> <ul style="list-style-type: none"> • Factoring out the Greatest This lesson teaches students how to find the GCF and LCM by factoring. This is a different method than is normally seen in textbooks. • Can You find the Relationship? Students will take their understanding of GCF and LCM and apply them to solve word problems and demonstrate their understanding by creating posters. • Can you say that another way? Students model how to express and addition problem using the distributive property. • Digesting the Distributive Property Students use the distributive property to express a sum of two whole numbers 1-100. <p><u>MARS/Shell</u></p> <ul style="list-style-type: none"> • Factors and Multiples This lesson unit is intended to help you to assess how well students are able to understand the meanings of the terms (GCF) and (LCM). <p><u>McGraw-Hill</u> Course 1, Chapter 1 Lesson 1</p>

Decoded Standard	
<p>MAFS.6.RP.1.1 In this standard, students learn to compare two quantities or measures such as 6:1 or 10:2. These comparisons are called ratios. Students discover that ratios can be written and described in different ways. For instance, 6:1 uses a colon to separate values. Ratios can also be stated with words such as 6 to 1, or as fractions such as $\frac{6}{1}$. This standard focuses on understanding the concept of a ratio, however, students should use ratio language to describe real-world experiences and use their understanding for decision making. (<i>Common Core Mathematics Companion</i>, Pg. 8)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> • Writing Ratios Students are asked to write part-to-part and part-to-whole ratios using values given in a table. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> • Grade 6, Module 1, Topic A, Lesson 1 Students understand that a ratio is an ordered pair of numbers which are not

<ul style="list-style-type: none"> • Interpreting Ratios Students are asked to explain the meaning of ratios in the context of problems. • Comparing Time Students are given a scenario involving an additive comparison of two quantities, asked to write a ratio, and explain its meaning. • Comparing Rectangles Students are asked to determine which of three given comparisons contains a correctly computed ratio in a context involving rectangles. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> • Games at Recess Students write sentences describing ratio relationships and use the appropriate symbolic notation for ratios. • Bag of Marbles Students develop fluency in their understanding of the relationship between fractions and ratios. 	<p>both zero and use precise language and ratio notation. Can be combined with Lesson 2</p> <ul style="list-style-type: none"> • Grade 6, Module 1, Topic A, Lesson 7 Students understand the relationship between ratios and fractions. <p><u>Illustrations</u></p> <ul style="list-style-type: none"> • The Golden Ratio Students examine different ratios to determine whether the Golden Ratio can be found in the human body. <p><u>CPalms</u></p> <ul style="list-style-type: none"> • The Concept of Ratios This lesson introduces students to the term ratio, its meaning and use, and the various ways in which a ratio can be presented. • My Favorite Recipe This lesson shows how ratios can be indicated in words such as "to", "for every", "out of every." <p><u>McGraw-Hill</u> Course 1, Chapter 1 Inquiry Lab: Ratios; Lesson 2</p>
---	--

Decoded Standard	
<p>MAFS.6.RP.1.2 This standard focuses student learning on the concept of a unit rate as special kind of ratio. Students compare different units of measure such as the amount of money earned to the hours worked while babysitting and calculate unit rates by setting up ratios and simplifying them. Students understand a situation in ratio form and write the unit that describes the situation using appropriate rate language with words such as <i>per</i>, and symbols such as / to compare different units or measures. (<i>Common Core Mathematics Companion</i>, Pg. 9)</p>	
Instructional Resources	
<ul style="list-style-type: none"> • <u>Formative Tasks</u> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> • Writing Unit Rates Students are given verbal descriptions of rates and asked to write them as unit rates. • Identify Unit Rates Students are asked to decide if given statements express unit rates. • Explaining Rates Students are asked to explain the meaning of given rates and identify any that are unit rates. • Book Rates Students write and explain the meaning of a ratio and corresponding unit rate in the context of a word problem. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> • Mangos for Sale Students generate a classroom discussion about ratios and unit rates in context. • Price per pound and pounds per dollar Students develop the concept of unit rates. • Riding at a Constant Speed, Assessment Variation Multiple choice task to gauge student understanding of unit rates. • The Escalator, Assessment Variation Multiple choice task to gauge student understanding of unit rates. • Hippos Love Pumpkins Students find unit rates in different situations involving unusual units. • Ticket Booth Students compare unit rates in a real world context. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> • Grade 6, Module 1, Topic C, Lesson 16 Students recognize that they can associate a ratio of two quantities, such as the ratio of miles per hour is 5:2, to another quantity called the rate. • Grade 6, Module 1, Topic C, Lesson 17 Given a rate, students find ratios associated with the rate. <p><u>CPalms</u></p> <ul style="list-style-type: none"> • Pancakes Over a Campfire! Students will learn how to set up ratios and calculate unit rates using a recipe. • Savvy Shopper This a culminating activity for unit rates that has students apply knowledge to purchasing groceries. Specifically how knowledge of unit rates can help save money over time. <p><u>McGraw-Hill</u> Course 1, Chapter 1 Inquiry Lab: Unit Rate; Lesson 3</p>

Decoded Standard

MAFS.6.RP.1.3a,b,d,e

In these standards, students use reasoning about multiplication and division to solve a variety of ratio and rate problems about quantities. They make tables of equivalent ratios relating quantities with whole-number measurements, finding missing values in the tables, and plot pairs of values on the coordinate plane. They use tables to compare ratios and solve unit rate and constant speed problems. Problems involving finding the whole given a part and the percent, such as 20% of a quantity means $\frac{20}{100}$, are also a focus. For these standards, students can use equivalent ratio tables, tape diagrams, double number lines or equations. Students connect ratios and fractions. (*Common Core Mathematics Companion*, Pg. 10)

Instructional Resources**Formative Tasks****Mathematics Formative Assessments (MFAS)**

- [Sara's Hike](#) Students are asked to solve a problem involving ratios.
- [Bargain Breakfast](#) Students are given the prices of three different quantities of cereal and are asked to determine which is the best buy.
- [Making Coffee](#) Students are asked to write ratios equivalent to a given ratio.
- [Party Punch – Comparing Ratios](#) Students are asked to compare ratios given in two different tables.
- [Comparing Rates](#) Students are asked to solve rate problems given the time it takes each of two animals to run different distances.
- [Measurement Conversion](#) Students are asked to make unit conversions.
- [Comparing Rates](#) Students are asked to solve rate problems given the time it takes each of two animals to run different distances.

Illustrative Mathematics Assessment Tasks

- [Mixing Concrete](#) Students practice solving ratio problems.
- [Voting for Three, Variation 1](#) Students define simple ratios, apply their understanding of ratios, and apply a known ratio to a new one.
- [Voting for Three, Variation 2](#) Students practice solving simple ratios in a more complex situation.
- [Voting for Three, Variation 3](#) Students solve ratio problems in context.
- [Converting Square Units](#) Students use reasoning to solve ratio problems.
- [Painting a Barn](#) Students use mathematics addressed in different standards in the same problem.
- [Friends Meeting on Bicycles](#) Students solve ratio problems in context.
- [Running at a Constant Speed](#) Students use reasoning to solve problems with equivalent ratios and unit rates from both sides of the ratio.
- [Jim and Jesse's Money](#) Students solve ratio problems in a real world context.
- [Speed Conversion](#) Speed Conversion Students perform a unit conversion in the context of speed while also focusing on the precision of the conversion factor.
- [Unit Conversion](#) Students study conversion between some volume and weight units.

Lesson Resources**Engage NY**

- [Grade 6, Module 1, Topic A, Lesson 3](#) Students develop an intuitive understanding of equivalent ratios by using tape diagrams to explore possible quantities of each part when given the part-to-part ratio can be combined with [Lesson 4](#)
- [Grade 6, Module 1, Topic A, Lesson 5](#) Students use tape diagrams to find an equivalent ratio when given the part-to-part ratio and the total or the difference of those two quantities. Can be combined with [Lesson 6](#)
- [Grade 6, Module 1, Topic B, Lesson 9](#) Students understand that a ratio table is a table of equivalent ratios and use ratio tables to solve problems.
- [Grade 6, Module 1, Topic B, Lesson 12](#) Students create equivalent ratios using a ratio table and represent these ratios on a double number line diagram.
- [Grade 6, Module 1, Topic B, Lesson 14](#) Students associate with each ratio A:B the ordered pair (A, B) and plot it in the x-y coordinate plane. Represent ratios in ratio tables, equations, and double number line diagrams and then represent those ratios in the coordinate plane. Can be combined with [Lesson 15](#).
- [Grade 6, Module 1, Topic C, Lesson 18](#) Students make use of the structure of division and ratios to model (5 miles)/(2 hours) as a quantity 2.5 mph.
- [Grade 6, Module 1, Topic C, Lesson 19](#) Students solve problems by analyzing different unit rates given in tables, equations, and graphs. Can combine with [Lesson 20](#).
- [Grade 6, Module 1, Topic C, Lesson 21](#) Students use rates between measurements to convert measurement in one unit to measurement in another unit.
- [Grade 6, Module 1, Topic C, Lesson 21](#) Students decontextualize a given speed situation, representing symbolically the quantities involved with the formula rate x time.

Illustrations

- [Do You Measure Up?](#) Students identify which units of measurement are used to measure specific objects, and they learn to convert between units within the same system.
- [Discovering Gallon Man](#) Students practice making volume conversions in the customary system.

Teacher Vision

- [Discovering the Magical Pi](#) In this lesson student use data on the circumference and diameter of various objects to calculate Pi.

CPalms

- [But Mom, I Really Want an iPad!!!! Part 1](#) A situational story is used to capture the students' interest and to help students create a visual for the relationship between quantities in a ratio.
- [Orange Juice Conversion](#) Students will be able to convert

measurements within systems and between systems.

- [Shopping and Conversion Word Problems](#) Presents students with three shopping problems that challenge students to convert between smaller and larger measurement units and use all four mathematical operations.
- [It's Carnival Time](#) This lesson uses a carnival theme that challenges the students to calculate unit rates and make measurement conversions to determine the best value for food.
- [Square Circles](#) This lesson will help students discover π as a constant ratio as they start by measuring squares, then move on to measuring circles.

MARS/Shell

- [Solving Real-Life Problems: Selling Soup](#) This lesson is intended to assess how well students can use proportional relationships to solve multistep ratio and percent problems.

Decoded Standard

MAFS.6.NS.2.3

This standard requires students to extend the models and strategies for the four operations previously developed for whole numbers in Grades 1-5 to decimals. Emphasis for addition, subtraction, multiplication, and division of multi-digit decimals is on using standard algorithms. Students estimate answers and self-correct errors in computation if needed. Fluently adding, subtracting, multiplying, and dividing multi-digit decimals means students can find a sum, difference, product, or quotient quickly and accurately. To obtain fluency, students need sufficient, on-going practice for each. (*Common Core Mathematics Companion*, Pg. 38)

Instructional Resources

Formative Tasks**Illustrative Mathematics Assessment Tasks**

- [Reasoning about Multiplication and Division and Place Value, Part 1](#) Develop reasoning and estimation strategies in order to support algorithmic computations.
- [Reasoning about Multiplication and Division and Place Value, Part 2](#) Develop reasoning and estimation strategies in order to support algorithmic computations.
- [Jayden's Snacks](#) Add and subtract multi-digit decimals in the context of money.
- [Buying Gas](#) Recognizing contexts and compute division of multi-digit decimals.
- [Gifts from Grandma, Variation 3](#) Multiply and divide multi-digit decimals in the context of money.
- [Movie Tickets](#) Multiply and divide multi-digit decimals in the context of money and interpreting remainders. (This task supports financial literacy)
- [Setting Goals](#) Subtract and divide multi-digit decimals in the context of money and interpreting remainders. (This task supports financial literacy)

Lesson Resources**Engage NY**

- [Grade 6, Module 2, Topic C, Lesson 14](#) Students use the algorithm to divide multi-digit decimals with and without remainders.
- [Grade 6, Module 2, Topic C, Lesson 15](#) Students use mental math and their knowledge of dividing multi-digit numbers to solve for quotients of multidigit decimals.

CPalms

- [Where Will We Stay?](#) Students explore lodging options for their dream family vacation. Students will plan a vacation for a family of four. With a budget of \$5,000 students will prepare a budget to include the cost of transportation, lodging, and attractions.
- [Florida Food Round Up!](#) Students will practice using a grocery list with a predetermined budget as they add and subtract decimals.
- [A Tasty Treat](#) In this lesson, students will be given a list of ingredients and prices they must use to create their own snack mix. Students will have to add, subtract, multiply, and divide decimal numbers.
- [The Mystery of Decimals](#) In this lesson, students review all four operations with decimals by solving problems in real-world context.

MARS/Shell

- [Using Standard Algorithms](#) Make sense of standard algorithms for addition, subtraction, multiplication and division of positive integers.

Lessons 1, 2, 4, 6 & 8

Grade 6 Math Adv Semester 1	Unit 3: Division of Fractions	Projected Time Allotment: 5 Days
Standards/Learning Goals:		Content Limits, Assessment Types, Calculator
<p>MAFS.6.NS.1.1 Interpret and compute quotients of fractions, and solve word problems involving division of fractions by fractions, e.g., by using visual fraction models and equations to represent the problem. <i>For example, create a story context for $(2/3) \div (3/4)$ and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that $(2/3) \div (3/4) = 8/9$ because $3/4$ of $8/9$ is $2/3$. (In general, $(a/b) \div (c/d) = ad/bc$.) How much chocolate will each person get if 3 people share $1/2$ lb of chocolate equally? How many $3/4$-cup servings are in $2/3$ of a cup of yogurt? How wide is a rectangular strip of land with length $3/4$ mi. and area $1/2$ square mi.?</i></p>		<ul style="list-style-type: none"> At least the divisor or dividend needs to be a non-unit fraction. Dividing a unit fraction by a whole number or vice versa (e.g., $\frac{1}{a} \div q$ or $q \div \frac{1}{a}$) is below grade level <p>Calculator: NO</p> <ul style="list-style-type: none"> Equation Editor GRID Multiple Choice Multiselect

Decoded Standard

MAFS.6.NS.1.1
 This standard emphasizes the use of fraction models including manipulative and visual diagrams to interpret, represent, and solve word problems with division of fractions. Students write equations to show how word problems are solved. Sixth graders interpret the meaning of fractions, the meaning of multiplication and division, and the relationship between multiplication and division to understand and explain why the procedures for dividing fractions make sense. What they are actually doing is working with a complex fractions. In the example

$\frac{2}{3} \div \frac{3}{4}, \frac{2}{3}$ is the numerator and $\frac{3}{4}$ is the denominator as $\frac{\frac{2}{3}}{\frac{3}{4}}$. (Common Core Mathematics Companion, Pg. 34)

Instructional Resources

Formative Tasks	Lesson Resources
<p>Mathematics Formative Assessments (MFAS)</p> <ul style="list-style-type: none"> Fraction Division Students are asked to complete two fraction division problems – one with fractions and one with mixed numbers. Juicing Fractions Students are asked to write and evaluate a numerical expression involving division of fractions and mixed numbers to model and solve a word problem. Contextualizing Fraction Division Students are asked to write a story context for a given fraction division problem. Models of Fraction Division Students are asked to explain the relationship between a fraction division word problem and either a visual model or an equation. <p>Illustrative Mathematics Assessment Tasks</p> <ul style="list-style-type: none"> Baking Cookies Students must first add fractions with familiar but unlike denominators then divide fractions by fractions. Cups of Rice Students use visuals to help understand the remainder and the fractional part of a mixed number answer. Dan’s Division Strategy Students explore the meaning of fraction division and to connect it to what they know about whole-number division. Traffic Jam Students visualize division of fraction problems with contexts where the quantities involved are continuous. 	<p>Engage NY</p> <ul style="list-style-type: none"> Grade 6, Module 2, Topic A, Lesson 1 Students use visual models, such as fraction bars, number lines, and area models, to show the quotient of whole numbers and fractions and to show the connection between them and the multiplication of fractions. Grade 6, Module 2, Topic A, Lesson 2 Students use visual models such as fraction bars, number lines, and area models to show the quotient of whole numbers and fractions. Students use the models to show the connection between those models and the multiplication of fractions. Grade 6, Module 2, Topic A, Lesson 3 Students use visual models such as fraction bars and area models to show the division of fractions by fractions with common denominators. Grade 6, Module 2, Topic A, Lesson 4 Students use visual models such as fraction bars and area models to divide fractions by fractions with different denominators. Grade 6, Module 2, Topic A, Lesson 5 Students demonstrate further understanding of division of fractions when they create their own word problems. Grade 6, Module 2, Topic A, Lesson 7 Students formally connect models of fractions to multiplication through the use of multiplicative inverses as they are represented in models. <p>CPalms</p> <ul style="list-style-type: none"> Dividing Fractions – Tackling Word Problems Students explore the foundation for dividing fractions as well as correctly solving word problems involving division of fractions. Dividing Fractions Students will explore the different methods

available for dividing fractions through a student based investigation.

- [Dividing by Fractions Discovery](#) Students derive the algorithm for dividing fractions using visual fraction models and equations to represent the problem.

Decoded Standard

MAFS.6.NS.3.5
 In this standard, students investigate positive and negative numbers (integers) in real-world scenarios as being opposite values or opposite directions such as 10° below zero (-10) and 10° above zero (+10). They use vertical and horizontal number lines to show all rational numbers and must explain that the meaning of zero is determined by the real-world context. (*Common Core Mathematics Companion*, Pg. 44)

Instructional Resources

<u>Formative Tasks</u>	<u>Lesson Resources</u>
<p>Mathematics Formative Assessments (MFAS)</p> <ul style="list-style-type: none"> Relative Fractions Students are given positive and negative fractions and asked to explain their meanings within the context of a problem. Relative Decimals Students are asked to explain the meaning of positive and negative decimals within the context of a problem. Relative Integers Students are asked to use numbers to represent gains/losses and to interpret the meaning of zero in the context of football. Rainfall Change Students are asked to interpret values given in a chart that represent positive and negative deviations from average rainfall. <p>Illustrative Mathematics Assessment Tasks</p> <ul style="list-style-type: none"> It's Warmer in Miami Students to apply their knowledge of integers in a real-world context. Mile High Students interpret the meaning of signed numbers and reason based on that meaning in a context where the meaning of zero is already given by convention. 	<p>Engage NY</p> <ul style="list-style-type: none"> Grade 6, Module 3, Topic A, Lesson 1 Students extend their understanding of the number line. Grade 6, Module 3, Topic A, Lesson 2 Students use positive and negative numbers to indicate a change (gain or loss) in elevation, temperature, and the balance in a bank account. Can combine with Lesson 3. Grade 6, Module 3, Topic A, Lesson 4 Students understand that each nonzero integer, a, has an opposite and that $-a$ and a are opposites and the same distance from zero on a number line. Can be combined with Lesson 5 Grade 6, Module 3, Topic A, Lesson 6 Students use number lines that extend in both directions and use 0 and 1 to locate integers and rational numbers on the number line. <p>CPalms</p> <ul style="list-style-type: none"> Positive or Negative, It's All About Shopping! This lesson introduces students to the concept of negative and positive integers as opposites and as indicators of movement, beginning with elevation and ending with real-world application to money. Positive, Zero, or Negative? This lesson involves students using positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of zero in each situation. <p>Better Lessons</p> <ul style="list-style-type: none"> Visualizing Integers in our World This lesson helps students make connections between art, math, and the real world by making connections in their daily lives. <p>McGraw-Hill Course 1, Chapter 5 Inquiry Lab: Integers</p>

Decoded Standard	
<p>MAFS.6.NS.3.6 The heart of this standard focuses on previous understanding with the use of both horizontal and vertical number lines. Students extend graphing points and reflecting across zero on a number line to graphing and reflecting points across axes on a coordinate grid. They identify and plot coordinates in all four quadrants of the coordinate plane. (<i>Common Core Mathematics Companion</i>, Pg. 45)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> ● Explaining Opposites Students are asked to graph on a number line and to explain the relationship between a number and its opposite in terms of the number line. ● Graphing on Cartesian Planes Students are asked to graph points given their coordinates and describe the coordinates of graphed points when the axes have different scales. ● Locating Quadrants Students are asked to determine in what quadrant or on which axis, points described algebraically, are located. ● Graphing Points in the Plane Students are asked to graph points given their coordinates and describe the coordinates of graphed points. ● Graphing Points on the Number Line Students are asked to find the coordinates of graphed points and graph points with rational coordinates on a number line. ● What is the Opposite? Students are asked about numbers and their opposites. <p><u>Illustrative Mathematics Assessment Task</u></p> <ul style="list-style-type: none"> ● Extending the Number Line Students understand that there is a need for negative numbers and to see that there is a natural representation of them on the number line. ● Reflecting Points over Coordinate Axes Students practice plotting points and their reflections. ● Plotting Points in the Coordinate Plane Students get experience labeling coordinate axes appropriately to plot a given set of points, which will mean choosing an appropriate scale. ● Integers on the Number Line 2 Students get an understanding that taking the opposite of a negative number will produce a positive number with equal distance from 0. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> ● Grade 6, Module 3, Topic C, Lesson 15 Students extend their understanding of the coordinate plane to include all four quadrants, and recognize that the axes. ● Grade 6, Module 3, Topic C, Lesson 16 Students recognize that when two ordered pairs differ only by sign of one or both of the coordinates, then the locations of the points are related by reflections across one or both axes. ● Grade 6, Module 3, Topic C, Lesson 17 Students draw a coordinate plane on graph paper in two steps: (1) Draw and order the horizontal and vertical axes; (2) Mark the number scale on each axis. <p><u>CPalms</u></p> <ul style="list-style-type: none"> ● Modern Math Warfare The lesson uses the classroom as a coordinate plane then moves into plotting points on a graph. It culminates with a game based on the "Battleship" game. All parts of the standard are covered in this lesson. ● Bomb the Boat – Sink the Teacher’s Fleet! In this lesson, students learn about the four quadrants of a coordinate plane and how to plot points in those quadrants. <p><u>McGraw-Hill</u> Course 1, Chapter 5 Lessons 6 & 7</p>

Decoded Standard	
<p>MAFS.6.NS.3.7 This standard focuses on understanding the ordering and the absolute value of rational numbers. Students explore the meaning of absolute value as the distance from zero on a number line. They learn that the value of -5 is less than -3 and that with negative numbers, as the absolute value increases, the value of the number decreases. Students interpret that absolute value in a real-world scenario refers to magnitude. For example, in the case of a debt of -30 dollars, the absolute value, 30 is the magnitude or size of the debt. Emphasis in this standard is also placed on comparing rational numbers using inequality symbols. (<i>Common Core Mathematics Companion</i>, Pg. 47)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> ● Position of Numbers Students are asked to describe the positions of numbers relative to each other on a number line. ● Submarines Students are asked to write integers to represent quantities given in context and to relate the integers with an inequality. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> ● Grade 6, Module 3, Topic B, Lesson 7 Students write, interpret, and explain order rational numbers in the real-world. Can combine with Lesson 8 and Lesson 9. ● Grade 6, Module 3, Topic B, Lesson 10 Students write and explain inequality statements involving rational numbers.

<ul style="list-style-type: none"> ● South Pole Students are asked to interpret an inequality relating two temperatures ● Visualizing Absolute Value Students are asked to identify a number's possible locations on a number line when given the number's absolute value. ● Absolute Altitudes Students are asked to compare two elevations and their absolute values and then interpret these comparisons within a given real-world context. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> ● Jumping Flea Students understand the absolute value of a number as its distance from 0 on the number line. ● Above and below sea level Students interpret signed numbers in a context as a magnitude and a direction and to make sense of the absolute value of a signed number as its magnitude. ● Integers on the Number Line 1 Students plot points on a horizontal number line and determine if the given inequality statements are true. ● Fractions on the Number Line Students plot fractions on a horizontal number line and determine if the given inequality statements are true. ● Comparing Temperatures Students compare signed numbers in a real-world context. 	<ul style="list-style-type: none"> ● Grade 6, Module 3, Topic B, Lesson 11 Students understand the absolute value of a number as its distance from zero on the number line. Can be combined with Lesson 12. ● Grade 6, Module 3, Topic B, Lesson 13 Students apply understanding of order and absolute value when examining real world scenarios. <p><u>CPalms</u></p> <ul style="list-style-type: none"> ● Absolutely Integers Students will graph on number line positive numbers and then negative numbers. <p><u>Share My Lesson</u></p> <ul style="list-style-type: none"> ● Introduction to Absolute Value This lesson is designed to introduce students to the concept and usage of absolute value. <p><u>McGraw-Hill</u> Course 1, Chapter 5 Lessons 2, 3 & 5</p>
--	--

Decoded Standard	
<p>MAFS.6.NS.3.8</p> <p>The focal point for this standard is solving problems by graphing points in all four quadrants of the coordinate plane. Students learn that the distance from a point on a coordinate plane to an axis is an absolute value. The coordinate plane is used to represent real-world scenarios. (<i>Common Core Mathematics Companion</i>, Pg. 49)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> ● Garden Coordinates Students are given the coordinates of the vertices of a rectangle and are asked to graph the rectangle and find its perimeter. ● Bike Lot Coordinate Students are asked to graph two points given their coordinates and to find the coordinates of two other points so that the four points represent the vertices of a square. ● Garden Area Students are given coordinates of three vertices of a rectangle and asked to determine the fourth vertex and the area of the rectangle. ● Determine the Distance Students are given the coordinates of three points (with the same x- or y-coordinate) and asked to determine the distance between pairs of points without graphing. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> ● Distances Between Points Students solve mathematical problems using points in the coordinate plane. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> ● Grade 6, Module 3, Topic C, Lesson 18 Students compute the length of horizontal and vertical line segments with integer coordinates for endpoints in the coordinate plane by counting the number of units between end points and using absolute value. ● Grade 6, Module 3, Topic C, Lesson 19 Students solve problems related to the distance between points that lie on the same horizontal or vertical line. <p><u>CPalms</u></p> <ul style="list-style-type: none"> ● Coordinate Grids: The Key to the City - solving real world problems using the coordinate grid In this lesson students use previous knowledge of graphing in a 4 quadrant coordinate grid and individually solve a real world problem involving finding distance on a coordinate grid <p><u>McGraw-Hill</u> Course 1, Chapter 5 Inquiry Lab: Find Distance on Coordinate Plane</p>

Grade 6 Math Adv Semester 1	Unit 5: Percent of a Quantity	Projected Time Allotment: 6 Days
Standards/Learning Goals:		Content Limits, Assessment Types, Calculator
<p>MAFS.6.RP.1.3 Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations.</p> <p>c. Find a percent of a quantity as a rate per 100 (e.g., 30% of a quantity means 30/100 times the quantity); solve problems involving finding the whole, given a part and the percent.</p>		<ul style="list-style-type: none"> Rates can be expressed as fractions, with “:” or with words. --	--

Decoded Standard

MAFS.6.EE.1.4
This standard focuses on combining like terms in expressions. Students substitute values into expressions to prove equivalence. For example, *Are $3(x + 4)$ and $3x + 12$ equivalent expressions?* Substitute a numerical value for x such as 2. Then, $3(2 + 4) = 18$ and $(3 \times 2) + 12 = 18$ so the expression are equivalent. (*Common Core Mathematics Companion*, Pg. 90)

Instructional Resources

Formative Tasks	Lesson Resources
<p>Mathematics Formative Assessments (MFAS)</p> <ul style="list-style-type: none"> • Identifying Equivalent Expressions Students are asked to identify expressions equivalent to a given expression and justify their responses. • Equivalent Exponents Students are asked to identify expressions equivalent to a given exponential expression and justify their responses. • Equivalent Expressions Students are asked to determine if pairs of expressions are equivalent and to justify their responses. • Property Combinations Students are asked to identify expressions equivalent to a given expression and justify their responses using properties of operations. <p>Illustrative Mathematics Assessment Tasks</p> <ul style="list-style-type: none"> • Rectangle Perimeter 2 Determine which expressions out of a group of four are equivalent and can be used to calculate the perimeter of a rectangle accurately. • Rectangle Perimeter 3 Compute the perimeter of a rectangle using two different algebraic expressions and explain why result is always the same. • Equivalent Expressions Apply the distributive, commutative, and associative properties to algebraic expressions to match expressions with those that are equivalent. 	<p>Engage NY</p> <ul style="list-style-type: none"> • Grade 6, Module 4, Topic C, Lesson 7 Students understand that a letter represents one number in an expression. • Grade 6, Module 4, Topic C, Lesson 8 Students understand that a letter represents one number in an expression. <i>Also covers EE.1.3 properties</i> <p>CPalms.</p> <ul style="list-style-type: none"> • Equivalent Expressions Students are asked to use properties of operations to match expressions that are equivalent and to write equivalent expressions for any expressions that do not have a match. <p>Illustrations</p> <ul style="list-style-type: none"> • Extending to Symbols In this investigation, students learn about the notion of equivalence in concrete and numerical settings. As students begin to use symbolic representations, they use variables as place holders or unknowns. <p>McGraw-Hill Course 1, Chapter 6 Inquiry Lab: Equivalent Expressions; Lesson 7</p>

Decoded Standard

MAFS.6.EE.2.6
This standard concentrates on writing expressions using variable that represent real-world or mathematical problems. Students learn that a variable represents an unknown number or any number in a specified set. (*Common Core Mathematics Companion*, Pg. 93)

ecoded Standard

MAFS.6.EE.2.7
 Attention for this standard is placed with solving equations for real-world and mathematical problems that involve positive rational numbers and zero. To solve the equation, students can draw pictures such as this example: *“Juan spent \$48.99 on three T-shirts. If each shirt is the same amount, write an algebraic equation that represents this situation and solve to determine how much one T-Shirt costs. The picture created is a bar model chart.”* Each bar is labeled S for T-shirt, so each shirt costs the same amount of money. The bar model represents the equation $3S = \$48.99$. To solve the problem, students divide the total cost of \$48.99 by 3.

(Common Core Mathematics Companion, Pg. 94)

Decoded Standard	
<p>MAFS.6.SP.1.2</p> <p>This standard focuses on the understanding that data collected to answer a statistical question can be analyzed by their distribution. A distribution is the arrangement of their values of a data set and is described as using its center (median or mean) and spread. The single value for each of the measures of center (mean, median, or mode) and measures of spread (range) is used to summarize the data. By finding the measures of center for a set of data, students used the value to describe the data in words. Students use histograms and box plots to describe a set of data using its center (mean, median, and mode), spread (range), and overall shape. (<i>Common Core Mathematics Companion</i>, Pg. 203)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> • Pet Frequency Students are asked to describe the distribution of data given in raw form. • Math Test Center Students are asked to describe the center of distributions of data given in dot plot format. • Math Test Spread Students are asked to describe the spread of distributions of data given in dot plot format. • Math Test Shape Students are asked to describe the shape of distributions of data given in dot plot format. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> • Electoral College Help students understand that a distribution can be described in terms of shape and center, and also to provide practice in selecting and calculating measures of center. • Average Number of Siblings Compare the mean and median 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p><u>Engage NY</u></p> <ul style="list-style-type: none"> • Grade 6, Module 6, Topic A, Lesson 2 Given a dot plot, students begin describing the distribution of the points on the dot plot in terms of center and variability. <p><u>Illuminations</u></p> <ul style="list-style-type: none"> • Exploring Mean and Median Using Box Plots Using an interactive applet, students can compare and contrast properties of measures of central tendency, specifically the influence of changes in data values on the mean and median. <p><u>CPalms</u></p> <ul style="list-style-type: none"> • Statistically Speaking Part I: An Investigation of Statistical Questions and Data Distribution Through cooperative learning activities, the students will develop an understanding of how to analyze the data collected to answer a statistical question.

<p>in a context where the data is slightly skewed to the right.</p>	<ul style="list-style-type: none"> • Statistically Speaking Part II: An Investigation of Statistical Questions and Data Distribution This lesson focuses on math concepts related to identifying clusters, gaps, outliers and overall shape of a line plot, it will help students build a strong foundation for future concepts in the statistics and probability domain. • Puppy Weights Using the information provided, create an appropriate graphical display and answer the questions regarding shape, center and variability. <p>MARS/Shell</p> <ul style="list-style-type: none"> • Mean, Median, Mode and Range Use a frequency chart to describe a possible data set, given information on the mean, median, mode, and range. <p>McGraw-Hill Course 1, Chapter 11 Lessons 1, 2, & 3</p>
---	---

Decoded Standard	
<p>MAFS.6.SP.1.3 This standard helps students understand that a data distribution may not have a definite center. Sixth graders discover that different ways to measure center produce different values. The median measures center as the middle value. The mean measures center as the value that each data point would take on if the total of the data values were redistributed equally. It is a balance point. Students recognize that a measure of variability can also summarize data because two very different sets of data can have the same median and mean but differ by their variability. (<i>Common Core Mathematics Companion</i>, Pg. 205)</p>	
Instructional Resources	
<p style="text-align: center;"><u>Formative Tasks</u></p> <p>Mathematics Formative Assessments (MFAS)</p> <ul style="list-style-type: none"> • Explain Measures of Center Students are asked to list measures of center and explain what they indicate about a set of data. • Explain Measures of Variability Students are asked to list measures of variability and explain what they indicate about a set of data. • Compare Measures of Center and Variability Students are asked to explain the difference between measures of center and measures of variability. • Analyzing Physical Activity Students are asked to calculate measures of center and variability, identify outliers, and interpret the meaning of each in context. 	<p style="text-align: center;"><u>Lesson Resources</u></p> <p>Engage NY</p> <ul style="list-style-type: none"> • Grade 6, Module 6, Topic B, Lesson 6 Students define the center of a data distribution by a “fair share” value called the mean. Can combine with Lesson 7 & Lesson 8 • Grade 6, Module 6, Topic B, Lesson 9 Students calculate the mean absolute deviation (MAD) for a given data set and interpret it as the average distance of data values from the mean. • Grade 6, Module 6, Topic B, Lesson 10 Students calculate the mean and MAD for a data distribution and use the mean and MAD to describe a data distribution in terms of center and variability. Can be combined with Lesson 11 to describe the similarities and differences between two distributions. • Grade 6, Module 6, Topic C, Lesson 12 Given a data set, students calculate the median of the data. • Grade 6, Module 6, Topic C, Lesson 13 Students calculate the median of the data and describe the variability in the data by calculating the interquartile range. <p>Illuminations</p> <ul style="list-style-type: none"> • Why is California So Important? 	<ul style="list-style-type: none"> • Play Like you “MEAN” It! Students will investigate how a measure of center, the mean, summarizes a numerical data set of all the values with a single number. <p>McGraw-Hill Course 1, Chapter 11 Lesson 5</p>
--	---

Decoded Standard

MAFS.6.SP.2.4

Students learn how to display data on dot plots, histograms, and box plots (also known as box and whisker plots). A dot plot is appropriate for small- to moderate-size data sets of up to 25 numbers and is useful for highlighting the distribution and spread of the data, including clusters, gaps, and outliers. Histograms display the distribution of continuous data using intervals on a number line. Box plots display the distribution of values in a data set by dividing the set into quartiles. After creating the plots students interpret them, giving meaning to the context with statements such as, “*There is little variation in these data because the range on this box plot is 3.*” Sixth graders learn to select the most appropriate display to represent the given data. (*Common Core Mathematics Companion*, Pg. 208)

Decoded Standard
<p>MAFS.6.G.1.1 Students take triangles and quadrilaterals and form rectangles, or take rectangles and/or other quadrilaterals and decompose them (take apart) into familiar shapes to find the area of the composite shape. A composite shape is a shape formed from other shapes. Students study composite shapes that are unfamiliar and decompose them into familiar shapes such as triangles and rectangles (which they know how to calculate the areas of) to find the area. This practice with familiar and irregular composite shapes and decomposition is applied to real-world situations. (<i>Common Core Mathematics Companion</i>, Pg. 156)</p>

Instructional Resources

Formative Tasks**Mathematics Formative Assessments (MFAS)**

- [Swimming Pool Walkway](#) Solve a problem involving finding the area of a composite plane figure.
- [Lost Key](#) Find the square feet of a garden by composing or decomposing the composite figure into rectangles.
- [Area of Quadrilaterals](#) Find the area of a trapezoid and a parallelogram by composing or decomposing into triangles and rectangles.
- [Area of Kite](#) Find the area of a kite by composing it into rectangles or decomposing it into triangles.
- [Area of Triangles](#) Find the area of two different triangles.

Illustrative Mathematics Assessment Tasks

- [Same Base and Height, Variation 1](#) Find the areas of triangles that have the same base and height (first variation/ most concrete).
- [Same Base and Height, Variation 2](#) Find the area of triangles that have the same base and height (second variation/ more abstract).
- [Finding Areas of Polygons](#) Students work on a sequence of area problems that shows the advantage of increasingly abstract strategies in preparation for developing general area formulas for parallelograms and triangles.
- [Base and Height](#) Students understand what is meant by a base and its corresponding height in a triangle and to be able to correctly identify all three base-height pairs.

Lesson Resources**Engage NY**

- [Grade 6, Module 5, Topic A, Lesson 1](#) Students show the area formula for the region bounded by a parallelogram by composing it into rectangles.
- [Grade 6, Module 5, Topic A, Lesson 2](#) Students justify the area formula for a right triangle by viewing the right triangle as part of a rectangle composed of two right triangles.
- [Grade 6, Module 5, Topic A, Lesson 3](#) Students show the area formula for a triangular region by decomposing a triangle into right triangles.
- [Grade 6, Module 5, Topic A, Lesson 4](#) Students construct the altitude for three different cases and deconstruct triangles to justify that the area of a triangle is exactly one half the area of a parallelogram.
- [Grade 6, Module 5, Topic A, Lesson 5](#) Students find area of a region bounded by a polygon by decomposing the region into triangles and other polygons.
- [Grade 6, Module 5, Topic A, Lesson 6](#) Students determine the area of composite figures in real-life contextual situations using composition and decomposition of polygons.

Illustrations

- [Discovering the Area formula for Triangles](#) Students develop the area formula for a triangle. Students find the area of rectangles and squares, and compare them to the areas of triangles derived from the original shape.
- [Finding the Area of Parallelograms](#) Students will use their knowledge of rectangles to discover the area formula for parallelograms.

CPalms

- [Area of a Triangle](#) Students will derive the area formula for a triangle using the relationship between a rectangle and triangle. Students will be able to apply the area formula to find the area of a triangle.
- [Area of a Right Triangle](#) Students will compose triangles into rectangles and decompose rectangles into triangles to determine their areas, and justify and find relationships among the formulas for the areas of different polygons .
- [Enrique's Ruined Carpet](#) Students use an apartment layout to find the area of carpeted floor by decomposing complex shapes into rectangles and triangles.

McGraw-Hill

Course 1, Chapter 9

Inquiry Labs: Area of Parallelograms, Triangles and Trapezoids.
Area of Irregular Figures; Lessons 1, 2, 3 & 6

Decoded Standard

MAFS.6.G.1.2

With this standard students build on their background knowledge of volume of right rectangular prisms with whole number dimensions by using manipulative to determine the volume of a right rectangular prism with fractional side lengths. Students relate this experience to the formulas for volume ($V=lwh$ and $V=Bh$) and find that their experience of counting the unit cubes yields the same result as using the formulas. Students then solve real-world and mathematical problems by applying volume formulas appropriately. (*Common Core Mathematics Companion*, Pg. 157)

Instructional Resources

Formative Tasks**Mathematics Formative Assessments (MFAS)**

- [Bricks](#) Students are asked to determine the volume of a right rectangular prism given fractional edge lengths.
- [Clay Blocks](#) Students are asked to calculate and explain the relationship between two approaches to finding the volume of a right rectangular prism.
- [Moving Truck](#) Students are asked to determine the volume of a right rectangular prism (truck) given fractional edge lengths.
- [Prism Packing](#) Students are asked to determine the number of unit prisms needed to fill a larger prism with fractional dimensions.

Illustrative Mathematics Assessment Tasks

- [Computing Volume Progression 1](#) Students explore the relationship between the side-lengths of a cube and its volume.
- [Computing Volume Progression 2](#) Students are asked to calculate volume through a real world multi-step problem.
- [Computing Volume Progression 3](#) Students are given the volume and are asked to find the height.
- [Computing Volume Progression 4](#) This task builds on a more abstract understanding of volume. This problem is based on Archimedes' Principle that the volume of an immersed object is equivalent to the volume of the displaced water.
- [Banana Bread](#) Provides students with a multi-step problem involving volume and discuss the difference between exact calculations and their meaning in a context.

Lesson Resources**Engage NY**

- [Grade 6, Module 5, Topic C, Lesson 11](#) Students apply the formula $V = lwh$ to find the volume of a right rectangular prism and use the correct volume units when writing the answer.
- [Grade 6, Module 5, Topic C, Lesson 12](#) Students extend the volume formula for a right rectangular prism to the formula $V = \text{Area of base times height}$.
- [Grade 6, Module 5, Topic C, Lesson 13](#) Students develop, understand, and apply formulas for finding the volume of right rectangular prisms and cubes.
- [Grade 6, Module 5, Topic C, Lesson 14](#) Students understand that volume is additive and apply volume formulas to determine the volume of composite solid figures in real-world contexts, and given the volume, they determine missing dimension.
- [Grade 6, Module 5, Topic B, Lesson 19](#) Students choose appropriate formulas to solve real-life volume and surface area problems.
- [Grade 6, Module 5, Topic B, Lesson 19a](#) Students apply the formulas for surface area and volume to determine missing dimensions.

Illustrations

- [Finding surface Area and Volume](#) Students use the isometric drawing tool to explore volume and surface area.

CPalms

- [Fill to Believe](#) Students work cooperatively to find the volume of a right rectangular prism, using whole and fraction units of measurement, using the volume formula, and using manipulatives to count the number of units necessary to fill the prisms, and compare it with the formula results.
- [How Many Rubik's Cubes Can You Pack?](#) A hands-on problem solving approach to find the volume of a right rectangular prism with fractional edges. Students design boxes and fill with Rubik's Cubes, create a formula from the patterns they found and apply fractional units to their formula.
- [How Much Can It Hold?](#) The students will utilize math cubes as they construct and analyze the relationship between the length, width, and height to the total amount of cubes. They will be able to apply it to real world applications of other right rectangular prisms and compare to determine which will hold the most volume.
- [How Many Small Boxes?](#) Students will extend their knowledge of volume from using whole numbers to using fractional units. Students will work with adding, multiplying, and dividing fractions to find the volume of right rectangular prisms, as well as, determining the number of fractional unit cubes in a rectangular prism.
- [Sound Is Not the Only Place You Hear About Volume!](#) Students will design their own data collection and organizing the data that they collect. They will apply the skill of finding volume to using fractional parts of a number (decimals) and finding the product using the volume formula.

MARS/Shell

- [Optimizing: Packing It In](#) Students Use mathematics to model a real world scenario concerning volume.

MAFS.6.G.1.3
 Students plot points in all four quadrants of the coordinate plane. Coordinates are the vertices of polygons. Students connect the points and name the polygons. By giving students coordinates of vertices of the polygon that have the same first and same second coordinate (examples: (3,4) and (3,9) or (7,6) and (15,6)), students are challenged to find a technique to determine the length of a side of the polygon (subtract same coordinates). Students then apply this knowledge to solve real-world and mathematical problems. (*Common Core Mathematics Companion*, Pg. 158)

Instructional Resources

<u>Formative Tasks</u>	<u>Lesson Resources</u>
<p><u>Mathematics Formative Assessments (MFAS)</u></p> <ul style="list-style-type: none"> • Polygon Grid Draw a polygon given the coordinates of its vertices and determine the length of the polygon’s diagonals. • Polygon Coordinates Draw a polygon given the coordinates of its vertices and determine both the lengths of sides and if any sides are parallel. • Fence Length Draw a polygon given the coordinates of its vertices and determine the perimeter of the polygon in a real-world context. • Patio Area Draw a polygon given the coordinates of its vertices and determine the area of the polygon in a real-world context. <p><u>Illustrative Mathematics Assessment Tasks</u></p> <ul style="list-style-type: none"> • Polygons in the Coordinate Plane Students practice plotting points in the coordinate plane and finding the areas of polygons. • Walking the Block Students apply the calculation of distances on a coordinate plane to a real life context. 	<p><u>Engage NY</u></p> <ul style="list-style-type: none"> • Grade 6, Module 5, Topic B, Lesson 7 Students use absolute value to determine distance between integers on the coordinate plane in order to find side lengths of polygons. • Grade 6, Module 5, Topic B, Lesson 8 Students connect points on the coordinate plane with characteristics and properties of polygons. • Grade 6, Module 5, Topic B, Lesson 9 Students find the perimeters and areas of irregular regions on a coordinate plane by decomposing into smaller polygons. • Grade 6, Module 5, Topic B, Lesson 10 Students determine distance, perimeter, and area in real-world contexts. <p><u>Illuminations</u></p> <ul style="list-style-type: none"> • Finding Your Way Around Students explore two-dimensional space via an activity in which they navigate the coordinate plane. <p><u>CPalms</u></p> <ul style="list-style-type: none"> • Plotting Polygons Students are challenged to plot coordinates on a graph, in order to create a mystery polygon, and find the length of its horizontal and vertical sides using the coordinates. • Plotting Polygons with GeoGebra Guide students through the process of graphing polygons on the coordinate plane and finding vertical and horizontal side lengths. • Profit Plaza Students use mathematical data and logic/reasoning to place vendors into retail spaces in a shopping plaza. They also find the area of each space and calculate the total leasing charges. The plans are given on a coordinate plane, so students will find the lengths of horizontal and vertical line segments (using the coordinates) to calculate the areas of the rectangular and composite spaces.

	<ul style="list-style-type: none"> • The Mystery of Crop Circles...on a coordinate plane Students will use their knowledge of plotting points on quadrant I of the coordinate plane to figure out other coordinate pairs within quadrants II, III, and IV. Students are challenged to match description cards to the matching "map" (four-coordinate grid). Students will draw their own polygons on the four-coordinate grid and provide the coordinates for each. • What Is Your Point? In this game, a student challenges a partner to recreate his or her quadrilateral or other shape on a geoboard by calling out the ordered pairs of the quadrilateral's vertices. <p>McGraw-Hill Course 1, Chapter 9 Lesson 5</p>
--	---

Decoded Standard

MAFS.6.G.1.4
Students begin learning about nets by cutting and folding nets of prisms. Nets are two-dimensional diagrams of three-dimensional shapes that can be folded into the three-dimensional shape. Building on students' previous knowledge of area, students can find the area of the rectangles and triangles that make up given nets. This leads to defining surface area as the sum of the area of the faces of the three-dimensional figure. Once students understand this concept, they solve real-world and mathematical problems involving surface area. (*Common Core Mathematics Companion*, Pg. 159)

Instructional Resources

MAFS.7.RP.1.1

This standard focuses on computing unit rates using ratios of fractions known as complex fractions. In a complex fraction, the numerator, denominator, or both are fractions. In the standard, $\frac{\frac{1}{2}}{\frac{1}{4}}$ is an example of a complex fraction. Complex fractions can be interpreted as division statements. For example, $\frac{\frac{1}{2}}{\frac{1}{4}}$ can be thought of as $\frac{1}{2} \div \frac{1}{4}$. Applications include situation where the quantities are measured in different units such as miles per hour, pounds per square foot, feet per second, and so on. (*Common Core Mathematics Companion*, Pg. 18)

Instructional Resources**Formative Tasks****Mathematics Formative Assessments (MFAS)**

- [Unit Rate Area](#) Convert this ratio to a unit rate and explain what this unit rate means in the context of the problem.
- [Computing Unit Rates](#) Write two unit rates and explain what each unit rate means in the context of the problem.
- [Comparing Unit Rates](#) Express a rate as a **unit** rate in gallons per hour and determine which is faster.
- [Unit Rate Length](#) Show how you converted this ratio to a unit rate.

Illustrative Mathematics Assessment Tasks

- [Cooking with the Whole Cup](#) Use a recipe to find unit rates for many different pair-wise ratios.
- [Molly's Run](#) Context involving constant speed provides a transition from working with ratios involving whole numbers to ratios involving fractions.
- [Molly's Run-Assessment Variation](#) This task is part of three assessment tasks that address various aspects of 6.RP domain and help distinguish between 6th and 7th grade expectations.
- [Track Practice](#) Ask students to find the unit rates that one can compute in this context with same and different units.
- [Buying Bananas-Assessment Version](#) Find a unit rate for a ratio of non-whole numbers.

Lesson Resources**Engage New York**

- [Module 1, Topic C, Lesson 11](#) Students use ratio tables and ratio reasoning to compute unit rates associated with ratios of fractions in the context of measured quantities such as recipes, lengths, areas, and speed.
- [Module 1, Topic C, Lesson 12](#) Students use ratio tables and ratio reasoning to compute unit rates associated with ratios of fractions in the context of measured quantities, e.g., recipes, lengths, areas, and speed.

Learnzillion

- [Find Unit Rates in Situations Involving Fractions](#) In this lesson you will learn how to find unit rates in situations involving fractions by using division.
- [Can Conundrum](#) Understand that we can use the same multiplication ideas with fractions as we can with whole numbers to maintain proportional relationships.

Yummy Math

- [Not enough mashed potatoes](#) Students change decimals to fractions, and calculate ingredient measures for various-sized gatherings.
- [How many pies does this behemoth make?](#) Students calculate the quantities of pumpkin puree and the number of pumpkin pies that could be made.

Videos

- [Unit Rates](#) Short video clip defining unit rate
- [Unit Rates](#) Shmoop video on unit rates (may require free account)
- [Finding Unit Rates by Simplifying Complex Fractions](#)

McGraw-Hill**Course 2, Chapter 1**

Inquiry Lab: Unit Rates
Lesson 2

Decoded Standard

MAFS.7.RP.1.2

Sections a-d of this standard break down the standard to give guidance on ways to recognize and represent proportional relationships.

- A. This standard emphasizes two methods for deciding whether a proportional relationship exists. One method is to use equivalent ratios in a table. If the ratios are equivalent, then you have a proportional relationship such as:

# of people in a room	1	2	3	4	5
# of hands in the room	2	4	6	8	?

The other method is to graph the relationship on a coordinate plane and observe whether the graph is a straight line that goes through the origin. Note that computation using cross-multiplication is not a part of this standard. (*Common Core Mathematics Companion*, Pg. 19)

- B. This standard focuses on proportional relationships that can be represented as tables, graphs, equations, diagrams, and verbal descriptions. Students have already seen tables, graphs, and verbal descriptions. The unit rate on a graph is the point where $x=1$. In an equation, it is the slope represented by the coefficient, m , in the formula $y = mx + b$. The terms *unit rate*, *constant of proportionality*, and *slope* are equivalent. Note that students are only required to read and interpret equations in this standard. (*Common Core Mathematics Companion*, Pg. 21)
- C. In the previous standard students read equations to find the unit rates. In this standard students are given verbal descriptions of proportional relationships and are expected to create the equations in the form $y=mx$. For example, in Town C if you are caught speeding, you receive a traffic ticket. The penalty is \$25 for every mile over the speed limit. What is the equation if p represents the penalty and m represents the number of miles over the speed limit? The equation is $p=25m$. (*Common Core Mathematics Companion*, Pg. 22)
- D. An example of a proportional situation is: The scale on a map suggests that 1 centimeter represents an actual distance of 4 kilometers. The map distance between two towns is 8 centimeters. What is the actual distance? The graph of this relationship is represented as:

please see image on Pg. 23 of the Common Core Mathematics Companion

Note the points (0,0) and (1,4). The point is the unit rate or slope of the line for the equation $d=4c$, where d is the total distance and c is the number of centimeters. (*Common Core Mathematics Companion*, Pg. 23)

Instructional Resources

Mathematics Formative Assessments (MFAS)

- [Teacher to Student Ratios](#) Graph four ordered pairs given in context and decide if the variables they represent are proportionally related.
- [Constant of Proportionality Trip](#) Identify and explain the constant of proportionality given a verbal description and a diagram representing a proportional relationship.
- [Finding Constant of Proportionality](#) Determine the constant of proportionality using a table and a graph and explain it within the context of the problem.
- [Deciding if Proportional](#) Decide if two variables are proportionally related based on data given in a table.
- [Writing an Equation](#) Write an equation to represent a proportional relationship depicted in a graph.
- [Identify Constant of Proportionality in Equations](#) Identify and explain the constant of proportionality in three different equations.
- [Graphs of Proportional Relationships](#) Identify the graph of a proportional relationship.
- [Babysitting Graph](#) Given a graph that models the hourly earnings, interpret ordered pairs in context.
- [Serving Size](#) Write an equation for the size of the serving and the number of calories.

Illustrative Mathematics Assessment Tasks

- [Art Class, Assessment Variation](#) Decide proportional relationship using a table, find a unit rate using non-whole numbers, and represent with an equation.

Lesson Resources

EngageNY

- [Module 1, Topic A, Lesson 1](#) Students compute unit rates associated with ratios of quantities measured in different units. Students use the context of the problem to recall the meaning of value of a ratio, equivalent ratios, rate and unit rate, relating them to the context of the experience.
- [Module 1, Topic A, Lesson 2](#) Students understand that two quantities are proportional to each other when there exists a constant (number) such that each measure in the first quantity multiplied by this constant gives the corresponding measure in the second quantity.
- [Module 1, Topic A, Lesson 5](#) Students decide whether two quantities are proportional to each other by graphing on a coordinate plane and observing whether the graph is a straight line through the origin.
- [Module 1, Topic B, Lesson 10](#) Students consolidate their understanding of equations representing proportional relationships as they interpret what points on the graph of a proportional relationship mean in terms of the situation or context of the problem, including the point (0, 0).

Yummy Math

- [Should I Buy the Big One?](#) Decide if the BIG one is a fair deal
- [Say Cheese!](#) Practice with proportional relationships of unlike units on double number lines

- [Buying Coffee](#) Find a unit rate in a context and to draw the graph.
- [Robot Races](#) Identify the points on a distance vs. time graph within context.
- [Robot Races, Assessment Variation](#) Explain the meaning of a point on the graph and compute and compare unit rates with fractions.
- [Sore Throats-Variation 1](#) Finding equivalent ratios and proportional reasoning.
- [Walk-a-thon 2](#) Translate information in a table (with decimals) and find unit distance and distance traveled per unit time. Translate into equations and graphs.
- [Cider versus Juice-Variation 1](#) Compare two rates in different units.
- [Proportionality](#) Make sense out of the definition of direct proportionality.

LearnZillion

- [Identify the constant of proportionality from a diagram](#) Student will identify the constant of proportionality from a labeled diagram by writing an equation of the form $y=mx$ and solving for m .

CPalms

- [How Does It Compare?](#) Students will be able to identify whether a statement shows proportionality or is simply two non-proportional ratios.
- [Are Corresponding Leaf Veins Proportional to Leaf Heights](#) Measure and graph leaves and vein lengths to determine proportionality.

MARS/Shell

- [Proportion and Non-Proportion Situations](#) Identify when two quantities are proportional or not. Solve proportionality problems.
- [Modeling: A Race](#) Recognize and use proportional relationships.
- [Busses Task](#) Works with a distance-time graph describing a bus journey.
- [Comparing Strategies for Proportion](#) This lesson unit is intended to help you assess whether students recognize relationships of direct proportion and how well they solve problems that involve proportional reasoning Problems.

Videos

- [Means-Extremes Property of Proportions](#)
- [How Do You Set Up a Proportion From a Word Problem?](#)

McGraw-Hill

Course 2, Chapter 1

Lessons 3,4,5 (For Lesson 3, consider using proportions for conversions instead of dimensional analysis)
 Inquiry Lab: Proportional and Nonproportional Relationships
 Inquiry Lab: Rate of Change
 Lesson 7, 9 (Constant of Proportionality)

Decoded Standard

MAFS.7.RP.1.3

In this standard students solve problems involving proportional relationships. Students set up and solve proportions using cross-multiplication. For example: "Directions to make a tablecloth call for $\frac{3}{4}$ yard of ribbon for every 2 yards of fabric. If you increase the amount of fabric used to 3 yards, how much ribbon will be needed?" The proportion is $\frac{\frac{3}{4}}{2} = \frac{x}{3}$. To cross-multiply:

$$3 \cdot \frac{3}{4} = 2x$$

Problems for this standard should be multi-step and include contexts with simple interest, tax, tips, commissions, percent error, percent increase/decrease, discounts, fees, markups, markdowns, discount, sales, and/or original prices. To calculate a percent increase from 2 to 10, find the difference between the two numbers, in this case, $10-2=8$. Take the difference, 8, and divide by the original number: $\frac{8}{2} = 4$. Multiply the quotient by 100: $4 \times 100 = 400\%$. (*Common Core Mathematics Companion*, Pg. 24)

Special Note: Students will solve multistep percent problems in Unit 2.

Instructional Resources

Formative Tasks

Mathematics Formative Assessments (MAFS)

- [Making Cookies](#) Find values given a set of rational number quantities.

Illustrative Mathematics Assessment Tasks

- [Friends Meeting on Bikes](#) Determine speed based on distance and speed approaching from opposite direction.
- [Two-School Dance](#) Calculate the fraction of a combined population given different ratios for two distinct populations.
- [Sale!](#) Students need opportunities to evaluate the relative savings of advertised sales.
- [Tax and Tip](#) How much will the total bill be, including tax and tip?
- [Shirt Sale](#) A tape diagram shows the solution in a very succinct way.
- [Gotham City Taxis](#) Solve a multi-step ratio problem that can be approached in many ways.

MARS/Shell

- [Ice Cream Task](#) Uses multi-step proportional reasoning to solve a real-world problem related to ice cream.
- [Short Tasks-Ratio and Proportions](#) Uses several short questions from RP cluster. Most problems are multi-step.

Lesson Resources

Engage NY

- [Module 1, Topic C, Lesson 13](#) Students use tables to find an equivalent ratio of two partial quantities given a part-to-part ratio and the total of those quantities, in the third column, including problems with ratios of fractions.
- [Module 1, Topic c, Lesson 15](#) Students use equations and graphs to represent proportional relationships arising from ratios and rates involving fractions.

Cpalms

- [Best Day Care Center in the Neighborhood](#) Students formulate a comparison-based solution to a problem involving choosing the best day care center in the neighborhood.
- [Developing a Sense of Scale](#) This lesson helps you assess whether students recognize relationships of direct proportion and how well they solve problems that involve proportional reasoning.
- [How Fast Can One Travel On a Bicycle?](#) Students investigate how the pedal and rear wheel gears affect the speed of a bicycle.

Yummy Math

- [Cruising](#) Consider how these cruise ships manage their resources and calculate per day and per cruise requirements.

Videos

- [Find an Unknown in a Proportion](#)
- [Find an Unknown in a Proportion 2](#)
- [How Do You Solve a Word Problem Using a Proportion?](#)
- [What is the formula for simple interest?](#)

<p>MAFS.7.EE.2.3 Students solve multi-step real-world and mathematical problems. The problems should contain a combination of whole numbers, positive and negative integers, fractions, and decimals. Students will apply what they learned in previous standards about convert fractions, decimals, and percents and use properties of operations to find equivalent forms of expressions as needed. Students will be expected to check their work for reasonableness using estimation strategies, which may include but are not limited to the following:</p> <ul style="list-style-type: none"> • rounding the values in the problem up or down and then adjusting the estimate to make up for the closeness of the rounded values to the originals, • using friendly or compatible numbers for the values in the problem that allow for common factors for multiplication or easy addition such as grouping hundreds or thousands, and • using benchmark numbers that are easy to work with such as 2 for $1\frac{7}{8}$ to make an estimate. <p><i>(Common Core Mathematics Companion, Pg. 108)</i> Special Note: Students will compute with integers and positive and negative numbers in Unit 3.</p>
Instructional Resources

Formative Tasks**Mathematics Formative Assessments (MFAS)**

- [Discount and Tax](#) Solve a multi-step problem involving percent.
- [Gas Station Equations](#) Solve a two-step problem involving percent.
- [Using Estimation](#) Assess the reasonableness of answers using estimation.

Illustrative Mathematics Assessment Tasks

- [Anna in D.C.](#) Solve a multi-step percentage problem that can be approached in many ways.
- [Discounted Books](#) Examine different ways of looking at percentages and turn a verbal description of several operations into mathematical symbols and identify equivalent expressions without variables.

Lesson Resources**EngageNY**

- [Module 3, Topic B, Lesson 7](#) Build an algebraic expression using the context of a word problem and use that expression to write an equation that can be used to solve the word problem.
- [Module 4, Topic D, Lesson 16](#) Students write and use algebraic expressions and equations to solve percent word problems related to populations of people and compilations.

Illuminations

- [Fun with Baseball Stats](#) Explore statistics surrounding baseball.
- [CPalms](#)
- [Math in Mishaps](#) Explore how percents, proportions, and solving for unknowns are used in important jobs.
- [Bargain Town, USA](#) Participate in a simulated real-world exploration of the relationship between fractions, decimals, and percents, by converting number forms and calculating discounted prices.
- [Percent of Change](#) Investigate percent of change in real-world situations and differentiate between an increase or a decrease.
- [Here's A Tip](#) Solve problems involving sales tax and tips; apply the properties of operations with numbers in decimal, percent and fraction form.

Yummy Math

- [Jock Tax](#) Consider the differences in state taxes that high paid pro athletes pay and determine how much more money an athlete should be paid in a high tax state in order to offset the taxes.

MARS/Shell

- [Steps to Solving Equations](#) Form and solve linear equations involving factorizing and using the distributive law.

Complex fractions may be used, but should contain fractions with single-digit numerators and denominators. <p>Calculator: Neutral</p> <ul style="list-style-type: none"> Equation Editor Multiple Choice Multiselect Table Item 	

Decoded Standard

MAFS.7.NS.1.1

- A. Students use real-world situation that model using opposite quantities to make zero. This prepares students for adding rational numbers with opposite signs such as $4 + (-4) = 0$. Examples can include temperature, elevation above and below sea level, owing money, and so on. (*Common Core Mathematics Companion*, Pg. 58)
- B. This standard formalizes the concept of a positive and negative making zero from the previous standard into written equations. For example, $4 + (-4) = 0$. The 4 and (-4) are opposites because they are equidistant from 0 on the number line in opposite directions. They are also additive inverses because their sum is 0. Be sure to include examples of fractions and decimals such as $-\frac{1}{2}$ and -4.72 so that students are working with all types of rational numbers. Addition of integers is modeled on a number line as in the following example: "Jose has \$6 and owes Steven \$5. How much money will Jose have left when he pays Steven what he owes?" *see image on page 59* (*Common Core Mathematics Companion*, Pg. 59)
- C. Subtraction of rational numbers can be thought of in terms of addition using the additive inverse (sometimes referred to as "the opposite"). For example, $6-7$ can be understood as $6+(-7)$. The distance between two rational numbers on a number line is the same as the absolute value of the difference between the two numbers. For example, using a real-world context, if the temperature is -6 at 7a.m. and $+8$ at noon, how many degrees has the temperature increased between 7 a.m. and noon? The difference between $-6 - 8 = -14$. $|-14| = 14$. Shown on a number line, the distance between -6 and 8 is 14. *see image on page 60* (*Common Core Mathematics Companion*, Pg. 60)
- D. Students have previously used the commutative, associative, and additive identity properties with whole numbers. These properties apply to rational numbers. For example:

Commutative Property of Addition: $4.5 + (-6) = (-6) + 4.5$

Associative Property of Addition: $6.9 + (-5) + 3.1 = 6.9 + 3.1 + (-5)$

Additive Identity Property of Addition (also called the Zero Property): $(-4.8) + 0 = (-4.8)$

(*Common Core Mathematics Companion*, pg. 61)

Instructional Resources

Formative Tasks**Mathematics Formative Assessments (MFAS)**

- [Exploring Additive Inverse](#) Describe a student-generated example of additive inverse and demonstrate on a number line.
- [Adding Integers](#) Add integers using a vertical and horizontal number line.
- [Rational Addition and Subtraction](#) Rewrite a subtraction problem as an equivalent addition problem and explain the equivalence using a number line.
- [Finding Difference](#) Find the difference between two integers using a number line.
- [Rational Water Management](#) Combine rational numbers, including fractions and decimals, and use the properties of operations to simplify calculations.

Illustrative Mathematics Assessment Tasks

- [Comparing Freezing Points](#) Calculate the differences of signed numbers.
- [Bookstore Account](#) Use algebra and the number line to understand why it makes sense that we sometimes represent debt using negative numbers.
- [Difference of Integers](#) Subtract integers in a real world context.
- [Differences and Distances](#) Connect the distance between points on a number line with the difference between numbers.
- [Distances Between Houses](#) Solve a problem involving distances between objects whose positions are defined relative to a specified location and to see how this kind of situation can be represented with signed numbers.
- [Rounding and Subtracting](#) Addresses what happens to rounding discrepancies when arithmetic is performed on rounded numbers and would be a good problem for classroom discussion.

Lesson Resources**Engage NY**

- [Grade 7 Module 2 Topic A Lesson 1](#) Students explore additive inverses and quantities that combine to make 0.
- [Grade 7 Module 2 Topic A Lesson 2](#) Students model integer addition on the number line
- [Grade 7 Module 2 topic A Lesson 3 & 4](#) Students understand adding integers by using arrows to show the sum of two integers.
- [Grade 7 Module 3 Topic A Lesson 5](#) Students justify the rules for subtracting integers.
- [Grade 7 Module 3 Topic A lesson 8 & 9](#) Students use properties of operations to add and subtract rational numbers without the use of a calculator.

CPalms

- [Add It Up with T-Charts](#) Use T-charts to add and subtract positive and negative numbers including mixed numbers and decimals
- [Discovering Our Addition of Integer Rules](#) [Develop the rules for adding integers by using the absolute value of integers and number lines.](#)
- [Money Matters: Integers are Integral](#) Design and develop a working budget for a one-month period after learning to add and subtract integers.
- [Math Match](#) Review math concepts, including shapes, shape names, addition, multiplication, negative numbers, and equivalent

<ul style="list-style-type: none"> • Distances on a Number Line 2 Reinforce understanding of rational numbers as points on the number line and visually understand that the sum of a number and its inverse is zero. • Operations on the Number Line Solidify understanding numbers as points on a number line and understand the geometric interpretation of adding and subtracting signed numbers.Ch 	<p>expressions. Teachers will need to supplement the text to include practice with rational numbers in various forms within the same problem.</p>
--	--

B Decoded Standard

MAFS.7.NS.1.2

Standards 7.NS.1.2a-d break down the understandings needed to multiply and divide rational numbers.

- A. Real-world contexts help students make sense of multiplication of rational numbers. For example, it makes sense that $4 \times (-6.50) = -26$ when the context for this equations is Janene owes \$6.50 to each of 4 people. How much does Janene owe altogether?
- It is common to read and understand (-6) as “the opposite of six” as well as “negative six.” Use “the opposite of” wording to make sense of equations such as $(-2) \times (-5)$ so that we read “the opposite of 2 times negative 5” or $((-1) \times 2) \times (-5) = -(2 \times -5) = -(-10) = 10$.
- Students should discover the rules for multiplying signed numbers, and the rules make more sense when given context. For example, the chart below shows equations with context. *see image on page 62 (Common Core Mathematics Companion, Pg. 62)*
- B. Division of rational numbers can be thought of as the inverse of multiplication relying on previous understanding of the relationship between multiplication and division. For example, $(-25) \div 5 = -5$ because $5 \times -5 = -25$. This preserves the relationship between multiplication and division found with whole numbers, including the fact that division by 0 is undefined. One explanation is: $x \times 0 = 5$, so $5 \div 0 = x$. There is no possible number for x. The equation $-\frac{p}{q} = \frac{-p}{q} = \frac{p}{-q}$ is for the teacher, no the students. Use both $p \div (-q)$ and $\frac{p}{-q}$ notations for division. *(Common Core Mathematics Companion, Pg. 63)*

- C. Present problems in real-world contexts that allow students to see the meaning of the properties of the operations. Properties include:

$$\text{Commutative Property of Multiplication: } 3.6 \times 2 = 2 \times 3.6$$

$$\text{Associative Property of Multiplication: } 3 \times (6 \times (-7)) \times (-2) = (3 \times 6) \times ((-7) \times (-2))$$

$$\text{Distributive Property: } -4(4 + (-3)) = ((-4) \times 4) + ((-4) \times (-3))$$

$$\text{Multiplicative Identify: } 1 \times (-9) = (-9)$$

$$\text{Zero Property of Multiplication: } (-4.6) \times 0 = 0$$

(*Common Core Mathematics Companion*, Pg. 64)

- D. To convert rational numbers in fraction form to decimal form, use the meaning of fractions as division. For example, $\frac{4}{5} = 4 \div 5$. Using long division, $4 \div 5 = 0.80$. From repeated examples, students learn that the decimal form either ends in 0s (as in the example) or repeated digits/sets of digits. Students learn to use the bar above a digit/set of digits to designate digits that repeat. For example, $\frac{2}{3} = 2 \div 3 = 0.\overline{6}$ and $\frac{39}{99} = 0.\overline{39}$. This prepares students to learn about irrational numbers in Grade 8. (*Common Core Mathematics Companion*, Pg. 65)

Instructional Resources

Formative Tasks

Mathematics Formative Assessments (MFAS)

- [Negative Times](#) Given an illustration of why the product of two negatives is a positive, provide a rationale.
- [Quotients of Integers](#) Given an integer division problem and asked to identify fractions which are equivalent to the division problem.
- [Understanding Products](#) Explain why the product of a positive and a negative ration number is negative.
- [Negative Explained](#) Describe a real-world context for a given expression involving the product of two rational numbers.
- [Applying Rational Number Properties](#) Evaluate expressions involving multiplication or rational numbers and use the properties of operations to simplify calculations.
- [Integer Division](#) Describe a real-world context for a given expression involving the quotient of two rational integers.

Illustrative Mathematics Assessment Tasks

- [Products and Quotients of Signed Rational Numbers](#) Provide a context for multiplying and dividing signed rational numbers, providing a means for understanding why the signs behave the way they do when taking products.
- [Why is a Negative Times a Negative Always Positive?](#) Understand the reason it makes sense for the product of two negative numbers to be positive.
- [Temperature Change](#) Provide a context for interpreting division expressions.

Lesson Resources

Engage NY

- [Grade 7 Module 2, Topic B Lesson 10](#) Students develop the rules for multiplying and dividing signed numbers.
- [Grade 7 Module 2 Topic B Lesson 11](#) Students understand the rules for multiplication of integers.
- [Grade 7 Module 2 Topic B Lesson 14](#) Students represent fractions as decimals (repeating and terminating decimals)
- [Grade 7 Module 2 Topic B Lesson 15](#) Students apply the rules for multiplying and dividing rational numbers
- [Grade 7 Module 2 Topic B Lesson 16](#) Students use the properties of operations to multiply and divide rational numbers.

MARS/Shell

- [Increasing and Decreasing Quantities by a Percent](#) Interpret percent increase and decrease, and in particular, to identify and help students who have the following difficulties: Translating between percents, decimals, and fractions. Representing percent increase and decrease as multiplication. Recognizing the relationship between increases and decreases.
- [Fencing Task](#) Calculate the cost of building fences from fence posts and wooden panels.

YummyMath

- [Two Suggestions for Father's Day](#) Asks students to change the amount in a blueberry muffin recipe to multiples of and fractions of $\frac{1}{4}$ cup measuring cup.
- [Passover Macaroons](#) Review fractions in the investigation on halving and tripling the fractional quantities of ingredients in a Passover macaroon recipe.

Illuminations

- [Multiplying Integers Using Videotape](#) Explore integer multiplication through the construct of videotaping.

CPalms

- [Math Match](#) Review math concepts, including shapes, shape

Decoded Standard
<p>MAFS.7.EE.1.1 Apply previously learned properties of operations (distributive, commutative, associative, identity, and inverse properties of addition and multiplication, as well as the zero property of multiplication) as strategies for adding, subtracting, factoring, and expanding linear expressions. Coefficients are limited to rational numbers that include integers, positive/negative fractions, and decimals. Use the properties to write equivalent expressions; for example, $3(4a + 2) = 12a + 6$ uses the distributive property. Substituting a numerical value for the variable and then evaluating the expressions to find the same solution is a tool to determine whether two expressions are equivalent. For example, $3(4a + 2)$ is equal to $12a + 6$. Let $a = 5$ and substitute 5 for a in both expressions.</p> $ \begin{array}{rcl} 3(4a + 2) & 12a + 6 & \\ 3(4 \cdot 5) + 2 & (12 \cdot 5) + 6 & \\ 3(20 + 2) & 60 + 6 & \\ 3(22) & 66 & \\ & 66 & \end{array} $ <p>(Common Core Mathematics Companion, Pg. 104)</p> <p style="background-color: yellow;">Special Note: Be sure to supplement rational coefficient problems in this unit. The textbook does not include many problems with fractions or decimals.</p>
